Catch-22

Andrew Schulz , Lutou Xiong , Kevin Salley, Irzem Ahmed

Four or more features. Put features into single text file feature file(e.g.,login.feature). Create directory in project repository called "testing" to store any files related to testing in your project. For this submission you can use one file called *all_feature***s that describes all the test cases or submit individual** *feature* **files.**

4 Features
Sign-in.feature
Feature: User sign-in
Example/Scenario: The User is signing into their account to see their projects/taks
Given: User is on the sign-in page
When: User enter their information in the username/password text boxes to sign-in
Then: User will then be able to see projects/tasks
And: User is logged in

Create new task.feature
Feature: Create new task
Background: Give a user is logged in
Scenario: User creates a task
Given a user is viewing their list of tasks
And they click "New"
And they type information regarding the task
And they click "Create"
Then a new task is created

Comment on a project
Feature: comment on projects.
Example/Scenario: The User is signing into their account will be able to add comments to projects and tasks
Given: User is on the projects view page
When: The user clicks on a comment button
Then: The user is able to add their comments on the project
And: User can view their comment

View a project/task.feature
Feature: View a project/task
Scenario: User views project/task
Given User is on homepage
When User selects view project/task
Then User views the project/task
